

EDF Renewable Services BLADE REPAIR SERVICES

EDF Renewable Services (EDF RS) is a leader in advanced blade repair processes and training to help wind farm owners minimize down time and maximize power production.

With three Sky Climber Blade Repair Platforms located throughout the country for rapid deployment, we have successfully completed over 600 utility-scale wind turbine blade repairs.

EDF RS has over 20 years experience in wind turbine blade repairs including but not limited to:

- Gelcoat repairs
- Lightning damage
- Tip repairs
- Leading edge erosion
- Blade close-outs
- Progression checks from previous damage findings
- Blade/nacelle repairs during initial turbine delivery

EDF RS currently employs specially-trained blade repair technicians:

- All blade repair technicians are trained in rope rescue techniques as well as other mandatory safety requirements
- Blade repair trainers are certified by the CCP Composites Training School
