

## EDF Renewable Services OPERATIONS CONTROL CENTER

**8,200** MW  
north america

**4,500**  
wind turbines

**775**  
solar inverters

### Standard Services

- 24/7/365 remote monitoring
- Fault Notification & Remote resets
- Technician/EMS dispatch notification
- Curtailment Management

### Advanced Services

In addition to our Standard Services, Advanced Services can be added to enhance your plant's performance. These include:

- Performance Monitoring
- SCADA Support
- Balance of Plant

EDF Renewable Services provides critical 24/7/365 remote monitoring and diagnostics from its state-of-the-art Operations Control Center (OCC), increasing equipment availability, reducing downtime and its associated operational and maintenance costs.

The upgraded facility combines our OCC, SCADA, and O&M auxiliary services into a Technical Services hub with a "One Touch" integrated front end monitoring system to improve response times and more effectively track key performance indicators.

The OCC is equipped with scalable technical infrastructure with component redundancy capable of disaster recovery, mitigating risk and strengthening compliance. This enhances the OCC's ability to **monitor and diagnose plant performance** and to provide additional sophisticated O&M services such as SCADA support, and Balance of Plant.

EDF Renewable Services understands the need for flexible solutions. With our Standard Service offerings or a-la-carte Advanced Services, we have a breadth of experience that guarantees we create the optimized solution for your asset's needs.

Our world-class services organization partners with customers to develop **comprehensive service solutions** in remote monitoring, performance monitoring, curtailment management, fault notification, on-site assistance, inspection and diagnostic services, training, technical upgrades, and technician dispatch.

The OCC uses advanced technology to optimize equipment availability and profitability, **increasing customers' revenue** around the clock.
